Manuals for consumer electronics typically do not include instructions for thoroughly cleaning or disinfecting the products. However, when consumer electronics are used in hospitals or clinics, cleaning is an important part of everyday use. Fully Loaded Electronics offers the following recommendations for keeping your consumer electronics clean in a medical environment.

### **Cleaning a Gaming Console**

Gaming consoles, including Xboxes and PlayStations, can be wiped down with a cleaning wipe such as Oxivir, Cavicide, alcohol wipes, or other cleaning products. Be careful not to get the console too wet, since too much moisture can damage the electronics.

### **Cleaning Video Game Controllers**

Gaming controllers, both wired and wireless, can be wiped down with a cleaning wipe such as Oxivir, Cavicide, alcohol wipes, or other cleaning products. Be careful not to get the controllers too wet, since too much moisture can damage the controllers. For tight spaces around toggles or buttons, we recommend a Q-Tip with a small amount of cleaning solution on the tip.

### **Cleaning Tablets**

Tablets, including iPads and Kindles, can be wiped down with a cleaning wipe such as Oxivir, Cavicide, alcohol wipes, or other cleaning products. Be careful not to get the tablet too wet, since too much moisture can damage the tablet.
